AMENDMENT(S) TO THE CLAIMS

1-4 (Canceled)

5. (Previously Presented) A shooting device, comprising:

at least one of a barrel, a rail and a stock; and

a clampable bipod including a clamp which is releasably clamped to at least one of said barrel, said rail and said stock, and a first leg and a second leg connected to said clamp, said clamp including a plurality of jaws, and a fulcrum between said plurality of jaws and both said first leg and said second leg, said clamp including a first arm connected to said first leg and a second arm connected to said second leg, said first arm including a first cam surface and said second arm including a second cam surface, said fulcrum being provided by said first cam surface in contact with said second cam surface, wherein each of said first leg and said second leg include a receiver connected to said clamp and an extender connect to said receiver, said receiver includes a longitudinal direction and a plurality of holes extending in said longitudinal direction, said extender includes a spring ball received in any of said plurality of holes.

6-9 (Canceled)

10. (Previously Presented) A clampable bipod for use with a shooting device, comprising:

a first leg and a second leg, each of said first leg and said second leg including a receiver connected to said clamp and an extender connect to said receiver, said receiver including a

- 5 longitudinal direction and a plurality of holes extending in said longitudinal direction, said
extender including a spring ball received in any of said plurality of holes; and
- a clamp connected to said first leg and said second leg, said clamp including a plurality of
jaws, and a fulcrum between said plurality of jaws and both said first leg and said second leg, said
clamp including a first arm connected to said first leg and a second arm connected to said second
10 leg, said first arm including a first cam surface and said second arm including a second cam
surface, said fulcrum being provided by said first cam surface in contact with said second cam
surface.

11. (Previously Presented) A clampable bipod for use with a shooting device,
comprising:

- a first leg and a second leg, each of said first leg and said second leg including a receiver,
an extender received within said receiver, a collet connected to at least one of said extender and
5 said receiver, and a collet nut connected to said collet; and
- a clamp connected to said first leg and said second leg, said clamp including a plurality of
jaws, and a fulcrum between said plurality of jaws and both said first leg and said second leg, said
clamp including a first arm connected to said first leg and a second arm connected to said second
leg, said first arm including a first cam surface and said second arm including a second cam
10 surface, said fulcrum being provided by said first cam surface in contact with said second cam
surface.

12. (Previously Presented) A clampable bipod for use with a shooting device,

comprising:

a first leg and a second leg; and

a clamp connected to said first leg and said second leg, said clamp including a plurality of
5 jaws, and a fulcrum between said plurality of jaws and both said first leg and said second leg, said
clamp including a first arm connected to said first leg and a second arm connected to said second
leg, said first arm including a first cam surface and said second arm including a second cam
surface, said fulcrum being provided by said first cam surface in contact with said second cam
surface, further including an aperture in said clamp, said aperture including a longitudinal
10 direction, at least one of said first leg and said second leg are rotatable about an axis transverse
to said longitudinal direction.

13. (Original) The clampable bipod of claim 12, wherein said clamp includes at least one
leg stop limiting a rotation of at least one of said first leg and said second leg.

14-16 (Canceled)

17. (Previously Presented) A method of attaching a clampable bipod to a shooting
device, comprising the steps of:

positioning said clampable bipod adjacent to at least one of a barrel, a rail and a stock of
said shooting device;

5 clamping said clampable bipod to at least one of said barrel, said rail and said stock, said
clampable bipod including a clamp connected to both a first leg and a second leg said clamp, said

clamp including a plurality of jaws, and a fulcrum between said plurality of jaws and both said first leg and said second leg, said clamp including a first arm connected to said first leg and a second arm connected to said second leg, said first arm including a first cam surface and said second arm including a second cam surface, said fulcrum being provided by said first cam surface in contact with said second cam surface; and

10 rotating at least one of said first leg and said second leg about an axis transverse to a longitudinal axis of said clamp.

18-21 (Canceled)
